BEST TREATMENT FOR CROP BOUND

Thin Muscular Walls of Organ Become Distended and Partially Paralyzed.

Remove Contents of Crop-Feed Sparingly on Whole Grains Until Wound Heals.

The crop of the chicken somet comes overloaded with feed, and its as because of the amounts actually in muscular walls become distended and partially paralyzed, so that the organ cannot be emptled, or the openng into the lower esophagus may become clogged with a feather, a straw, or some other substance which the bird has swallowed. The crop is greatly distended and the mass of feed is rather hard and firm. In both ases the symptoms are the same, and eatment should be conducted on the ame principles, specialists say. For treatment pour one-fourth to one-half ounce of melted lard or sweet oil down the throat and manipulate the ntents of the crop with the hand in such a way as to tend to break up the mass. Unless the passage is closed the contents of the crop will usually pass away within a few hours. For a

sharp knife, lancet or razor make an incision about 11/2 inches long through object and wash out the crop with Irene Johnson of Blooming Prairie warm water. Pass the finger, well Minn., whose garden club work may oiled, into the esophagus to see that be summarized as follows: Sew up the wall of the crop first, garden club, \$3. then the outer skin, using white silk

grains until the wound heals, and do not give any water for 24 hours. ADAPTABILITY IS NECESSARY trip to Minneapolis. Success Can Only Be Attained When Right Man Is in Right Place in

CARING FOR TOMATOES

The chief advantages of prun ing and staking tomatoes are: 1. A larger number of plants can be set on the given area. 2. The tomatoes will ripen little earlier when plants are pruned and staked. 3. The fruit is kept off the ground, is clean, easy to gather, and less likely to decay. 4. The quality of the fruit is usually better on plants that are
